How to format cell size excel. Kendo spreadsheet set cell format. How to format cell data in excel. How to set cell format in excel. How to save a cell format in excel.

The Spreadsheet supports cell-formatting options such as formatting of strings, text, numbers, dates, and time. Strings While the format strings are compatible with the Excel number formats, some notable exceptions still exist. A format string consists of one or more sections that are separated by semicolons. Optionally, a section specifies a color and a condition. The following example demonstrates how to display a number with up to three decimals. `###` The following example demonstrates how to display positive numbers, or zero, in green, and negative numbers in red. `[Green]###;[Red]#` The following example demonstrates how to display positive numbers in green, negative numbers in red, and the "Zero" text in blue if the number is zero. `[Green]###;[Red]#;[Blue]"Zero"` This following example is the same as the previous one, with the difference to display any possible text in the cell in magenta. `[Green]###;[Red]#;[Blue]"Zero";[Magenta]@` The following example demonstrates how to format the Spreadsheet conditionally.
